CAT201 – Integrated Software Development Workshop

Semester 1, 2025/2026

Assignment 2

Objective:

- To explore how to use modern web development tools such as node.js, react.js.
- To apply the principles of GUI design and using react.js, JavaScript or web tools for designing a company web home page that includes text, images, and video.

Specification:

As a computer science graduate, you and your course mates want to form a new IT related company, for example: software house, web design company, IT consultants, IoT specialists. Use web tools such as node.js and react.js to build your company home page that introduces company information including name, products or services, and other particulars. Besides that, it introduces company background such as mission, vision, and team. It can use any graphic tool or video editing tools to edit the content. Each team member must upload his/her photo and describe the position in the company.

Include your design screenshots, individual scope, or division of work and one page description about your developmental and design work in your report (pdf format). The web pages can be viewed on different devices such as desktop or mobile. If it can be accessed from internet (not local), includes the URL of the home page.

Record your presentation that lasts within 5 minutes and attach it with your report.
